

Standard Operating Procedures (SOPs) for IT Teacher

Objective

To effectively deliver IT education, enhance students' fundamental computer skills, and provide hands-on experience to develop their proficiency in computer usage.

Audit Preparation

1. Organize and maintain records of students' work.
2. Prepare an inventory list of all lab equipment.
3. Submit a weekly schedule of practical classes and performance reports.
4. Keep student attendance and progress data updated.

Responsibilities

1. Lesson Planning:

- Plan theoretical and practical lessons for students.
- Prepare simple and understandable content tailored for Grade 2 and 3 students.

2. Practical Sessions:

- Schedule weekly practical classes in the computer lab.
- Train students in basic computer operations, including turning the computer on/off, using the mouse, keyboard, and introductory software.

3. Lab Maintenance:

- Ensure proper maintenance of all computer lab equipment.
- Report software updates, antivirus installations, and hardware issues to the administration.

4. Student Guidance:

- Assist students with difficulties in understanding computer concepts or operations.
- Teach basic cyber safety rules and computer ethics to students.

5. Record Keeping:

- Maintain attendance records for practical classes.
- Prepare performance reports for each student.

6. Coordination with Administration:

- Communicate lab requirements and issues to the school administration.
- Provide necessary information and records during audits.

Guidelines for Conducting Practical Classes

1. Preparation Before Class:

- Check all computers to ensure they are functioning properly.
- Prepare software and hardware needed for the lesson.

2. During Class:

- Divide students into groups if the number of computers is limited.
- Engage each student in practical work and monitor their activities.
- Assign simple tasks using basic applications (e.g., MS Paint, Notepad, etc.).

3. After Class:

- Shut down all computers and arrange the equipment properly.
- Review students' work and provide constructive feedback.

General Rules for Students in Computer Lab

1. Maintain cleanliness and discipline in the computer lab.
2. Do not touch hardware without permission.
3. Use only the software approved by the teacher.
4. Handle computers and equipment carefully.
